PROFESSIONAL SUMMARY

Full-Stack Software Engineer with 4+ years architecting solutions across **React and Python/FastAPI**, building production applications that integrate frontend UI with backend **REST APIs, authentication, and database services** (PostgreSQL, MongoDB). Delivered a React 18 platform for Hitachi GenAI and a healthcare application securing data across 50+ locations with JWT/bcrypt-based authentication. Comfortable working across the full stack — API design, secure implementation, testing (Jest/PyTest), and **informal mentoring through code reviews**. Some self-driven exposure to **Next.js, Docker, and Kubernetes**, currently building on that foundation toward broader full-stack and DevOps depth.

TECHNICAL SKILLS

Frontend: React JS (v18), TypeScript, JavaScript (ES6+), Redux, Redux-Saga, React Hooks, Context API, Angular, responsive design

Backend: Python, FastAPI, Node.js, Express.js, RESTful API design, authentication & authorization

Databases: PostgreSQL, MongoDB, data modeling, session management

Testing: Jest, PyTest, unit testing

Exposure / Self-Learning: Next.js, Docker, Kubernetes, Azure

Security: JWT (jsonwebtoken), bcrypt encryption, role-based access control

Practices: Agile/Scrum, code reviews, informal mentoring, Git, GitLab, JIRA, Copilot, Claude

WORK EXPERIENCE

Senior Software Engineer | GlobalLogic India, Noida

Jun 2022 – Present

- Architected and delivered a full-stack **React 18** application for Hitachi GenAI, integrating with a **Node.js/Python (FastAPI)** backend to automate image-annotation workflows for AI training pipelines.
- Designed and integrated **REST APIs** using FastAPI with **PostgreSQL** — structured data models, authentication, and session management for a scalable service.
- Implemented **authentication and authorization** (jsonwebtoken, bcrypt) to secure a production application live across 50+ locations.
- Engineered a custom text-annotation library (TypeScript, React Hooks), supporting 3+ modes with a focus on reusable, maintainable architecture.
- Wrote unit tests and reviewed teammates' code, informally **mentoring** on best practices and code quality across frontend and backend work.
- Revamped the patient insurance-verification module for a healthcare client, optimizing workflows and claims-processing performance.
- Collaborated with cross-functional stakeholders in an **Agile/Scrum** environment, from requirements through delivery and deployment.

Software Engineer Intern | Infosys, Mysore

Jan 2022 – Jun 2022

- Developed a **React/Redux** hiring portal processing 5,000+ candidate submissions per quarter, integrating with Strapi CMS and **PostgreSQL** to synchronize job postings and applicant data.
- Implemented responsive UI with Bootstrap and Material UI; applied client-side validation, reducing submission errors by 20% and improving data quality.
- Produced user guides and API reference documentation; built a traceability matrix mapping recruiter workflows to UI components, supporting internal audit and certification processes.
- Managed the Git codebase with structured code reviews and JIRA documentation across a cross-functional team of 4 developers.

ACHIEVEMENTS

- Received "Spot Award of the Month" at GlobalLogic.
- Received "Integrated Team Award" for cross-functional collaboration and feature delivery.

EDUCATION

B.Tech, Computer Science & Engineering | PSIT College of Engineering, Kanpur | **CGPA: 8.13 / 10** | Jun 2022
